Concept

Think Assured Endpoint Protection is based on the best Internet Security technology on the market that we have found. It is Cloud based meaning all the information required to protect your device is held in one central location. As soon as a threat is known about anywhere in the world your machine is up to date and protected. It completely removes the need to apply definition updates on the local device.

The benefit of this technology is the agent on your device is very small making it faster and meaning it has very little impact on your device. Virtual Sandboxing technology records changes made by potentially malicious files. Changes may then be rolled back to undo damage if needed.

Usage

Think Assured Endpoint Protection can be installed on Workstations, Laptops, Servers and Mobile Devices, so long as they are running currently supported Microsoft operating systems. Mobile Devices include Android and iPhones.

Remediation

Think I.T. will be notified if a non-automatically remediated infection occurs. If any remediation is required and authorised by the client then Think I.T. will proceed to fix the problem.

Think Assured Endpoint Protection Plus

As an added option, we'll take the ownership of your protection and ensure that all remediation work is covered at no extra charge.

Limitations

Think Assured Endpoint Protection is not an Anti SPAM product. Think I.T. recommends that spam filtering should be performed before the email gets into the clients network. For Think Assured Endpoint Protection + all endpoints must be covered.

Conditions

Where no plus option is added, all remediation labour is billable at your normal hourly rate.

Installation is at a fixed one off cost per device.

Operating system must have current manufacturers support.

Think Assured Endpoint Protection plus is included in our Think Assured Managed Services offering.
